

VARIABLE FOOTPRINT-3 SERIES SPIDER CRANES

URW-376 • URW-506 • URW-547
URW-706 • URW-706-2 • URW-1006+

The all new, innovative, variable footprint option is now available on a range of UNIC mini spider cranes including the UNIC URW-376, URW-506, URW-547, URW-706, URW-706-2 and URW-1006. The introduction of variable outriggers enables these cranes to be used in 47 different outrigger combinations, whilst maintaining the optimum lifting capacity within any given zone. The adjustable footprint also increases the flexibility and usability of these mini cranes, enabling them to operate in some of the most confined areas like never before.

The fully automatic system constantly monitors the extension of each outrigger before calculating the cranes maximum capacity between two adjacent outriggers, the zone capacity is restricted by the lesser extended outrigger. The new 7" screen outrigger display, clearly displays each outrigger extension, zone safe working loads and provides the operator with visual and audible warnings to ensure optimum safety should the operator slew into a zone outside of the cranes working footprint.

VARIABLE FOOTPRINT-3 SERIES SPIDER CRANES

URW-706 • URW-706-2 • URW-1006+

The Variable Footprint-3 series of UNIC spider cranes are also fitted with a full range / slew limitation system, allowing these mini machines to be used in some of the most tight and compact working areas. The range limiting options include standard height limitation if working under a flat structure or floor, variable height limit for working in a multilevel structure, slew limitation while working around one fixed obstruction (standard use on railways and highway projects) and variable slew limitation for use when there are multiple obstructions within the cranes working area.
